To : Best Tyre Protection Sealant Int'l  
Kind attention : Mr. A. Fragatos  
C.E.O.

Dear Sir,

Responding to your request, we would like to certify that your product **Best TPS Enforced** type, has been applied in a huge number of tyres since we started cooperating.

Monitoring the consequences of your product on different kinds of tyres for more than two years now, we can report the following:

- a. Our customers, especially in earthmoving and lifting business, repeat product applications to new tyres, continuously in a percentage exceeding 95% .
- b. They are introducing **Best** to their colleagues, because they save downtimes.
- c. We have noticed no chemical reaction between the rubber of the tyre and the chemicals of your product
- d. We have not noticed any corrosion on the rim or the metal parts of the valve. If rims are rusted before we inject **Best**, the product by itself makes the rust softer and we can easily clean it after a period of time.
- e. We can easily inspect the internal surface of the tyre and repair extensive damages, even with the product inside or by removing and reusing it.
- f. **Best** is environmentally friendly, since it turns to pure rubber, after it is dried.

As tire professional and dealers of the most reputable tyre manufacturers, we recommend **Best** as a product cost worthy for us and our clients, having only positive effects and no negative consequences on the wheels, on a long term basis.

Sincerely

ΜΙΧΑΗΛΙΔΗΣ ΓΕΩΡΓ. ΙΩΑΝΝΗΣ
