Athens, April 12th 2006

Dear Mr. Fragatos

Following your request, we are happy to provide this recommendation letter.
Our company, as exclusive Dealers of Michelin in the Earthmoving Tyre sector, having more than 60% of the total sales in Greece, as well as dealers of most reputable tyre manufacturers for all kinds of tyres like transportation vehicles, lifting machines, recreation vehicles etc, has used your material **Best T.P.S.** for more than three years now without any problems either with your company or with your products.

Our clients compliment us for introducing to them **Best**, which has been proven better than its specifications and far better than we expected to be accepted in the market.

All these three years that we change and check our clients tyres we have noticed that there is no effect or chemical reaction between your product and the internal surface of the tyre, the rim or the valve.

Our clients are happy to use **Best** because they have eliminated the down time of their machinery to the minimum possible and that saves them both time and money.
I would like to underline the case of the construction company "ATTIKI DIODOS"
They brought to us a Bobcat tyre, in which we had applied the product, with 27 nails in it, still keeping its original pressure and still operating. They never change tyres without applying your product in them.

Concluding, we strongly recommend your product **Best T.P.S. Enforced**, both to your distributors and to end users.

Very truly yours

Panagiotis Papadopoulos
Owner and Managing Director
